Kingdom Web Pros Digital Marketing Review
for pageroofandcontracting.com
May 22, 2023

Here at Kingdom Web Pros, we are family! Trust and teamwork are among our greatest strengths. With clients local and abroad, our highest aim is to maintain excellence in quality, design, functionality, results, and customer satisfaction!

Our objective is to promote products, services, and tools which assist in making YOUR business and/or personal life more profitable and successful! As Zig Ziglar once said, "If you will help enough other people get what they want, then you will eventually get what you want!"

Bottom line; if we can't help you succeed, then we don't even want your business! We seek to earn our place in the market place by making it a better place for all we serve.

SEO Assessment for pageroofandcontracting.com

An SEO assessment was performed on the pageroofandcontracting.com website to identify SEO weaknesses and the feasibility of launching an SEO campaign. General on-site optimization issues have been outlined in detail below.

1) TITLE Tags - Each web page can have a unique page <title> tag which tells search engines what the page is about. The page title is one of the most important SEO elements, and the home page is the most important page of any website, including pageroofandcontracting.com.

Web Page Title Tags are Too Short: Page title tags should be used to their full capacity. When page title tags are too short, keyword targeting opportunities are lost by not taking full advantage of the tag to maximize keyword targeting opportunities. Google allows page title tags to be up to 68 characters in length. For pageroofandcontracting.com, we found that the home page title tag and some interior web page tags were far less than 68 characters in length, missing keyword targeting opportunities.

Web Page Title Tag Keyword Quality: The incorporation of quality keywords that appeal to a large audience is critical to maximize both traffic volumes to pageroofandcontracting.com and sales conversion rates from that traffic. We found that the selection of keywords currently being targeted within the page title tags of interior web pages could be significantly improved, allowing for increased opportunity to generate activity through the website.

Interior Page Title Tag Keywords are Non-Ideal: Relevant target keywords have been selected for some interior web page title tags, however, better target keywords exist which are either more relevant, or equally relevant, but are more popular. Pageroofandcontracting.com SEO potential could be improved by adjusting the target keyword selection.

Web Page Title Tag has Weak Local Optimization: The website serves a local community like a city or a state, however, these local references are not incorporated within the page title tags of the home page and some interior web pages. Local citations on pageroofandcontracting.com should be treated like keywords, reinforcing information to the search engines about where the products or services are being offered.

Web Page Title Tag Repeats Keywords: Words within some page title tags of interior web pages are repeated unnecessarily. Once Google sees a keyword in a title tag, a second reference is not needed as Google "gets it." Furthermore, the repeated words waste valuable space within the title tag that could be used to incorporate additional target keywords. Some people may also feel that repeated keywords in a page title looks contrived. The impacted page title tags on pageroofandcontracting.com should be reconstructed to be more efficient and appealing to both the search engines and people.

SEO Assessment Continued...

Web Page Title Tag Awkward: The content within some interior web page title tags on pageroofandcontracting.com reads awkwardly. While search engines cannot yet determine if content looks "funny" or unprofessional, people do notice. Awkward phrasing can lead to diminished click-through rates from the search engines to the pageroofandcontracting.com website, leading to reduced traffic. Worse still, Google notices decreased click-through rates compared to competitor websites and will respond negatively by reducing search engine rankings. Google wishes to display the best search results to Google users. For Google, websites with low click-through rates are less desirable than websites with higher click-through rates, forcing Google to lower rankings accordingly.

Web Page Title Tag has Company Name Only: The page title tags on the home page and some interior pages on pageroofandcontracting.com contain only the name of the company. While it is good to include the company name within the page title tag, other descriptive phrases including target keywords should also be added.

Web Page Title Tag Keyword Positioning: Research has shown that the position of a primary target keyword within a page title tag impacts how influential that keyword is for search engine rankings. Currently for the page title tags of the home page and some interior web pages of pageroofandcontracting.com, targeted search phrases are not at the beginning, leading to diminished search engine ranking opportunities for those search phrases.

2) META Description Tags - Like page title tags, META Description tags are also seen within search engine results listings. META Description tags provide details about the purpose of each page and when crafted professionally can influence click-through rates from the search engines to a web page.

Web Page META Description Missing: The META Description tag for some interior web pages of pageroofandcontracting.com are missing, which forces Google to craft descriptions of its own. This leads to the strong possibility of delivering non-influential content to sales prospects and consequently lowered click-through rates. Lower click-through rates will result in lower traffic volumes to pageroofandcontracting.com and diminished search engine rankings. Rankings are lowered because Google wishes to serve search results for the most desirable websites as indicated by stronger click-through rates.

Home Page META Description Too Long: Google must limit the amount of content included within a META Description tag. If a META Description tag is too long, Google will either truncate it or build a new Description on its own. In either event, your intended message is not delivered to your audience which could lead to diminished click-through rates to your website. For the home page of pageroofandcontracting.com, lowered click-through rates could translate to less traffic and lowered search engine ranking potential.

In addition to having some web pages with META Description tags that are too long, we also identified META Description tags that are too short.

Web Page META Description Too Short: META Description tags relay details about a web page and influence click-through rates. The content delivered through the search engines to search engine users should be relevant, descriptive and compelling. For pageroofandcontracting.com the META Description tags for some interior web pages are too short and do not adequately speak to people finding these listings on search engines.

SEO Assessment Continued...

Web Page META Tag Targeting Mismatch: The execution of on-page content should include having the same target keywords used within the page title tag to also be used within the META Description tag. For some interior web pages of pageroofandcontracting.com, keyword targeting is not in sync between page title tags and META Description tags. This leads to weakened keyword targeting which reduces the opportunity for each web page to capture competitive rankings for the intended target search phrases.

Web Page META Description Uncompelling: The META Description tags on some interior web pages of pageroofandcontracting.com do not adequately describe the purpose of each web page. Either the content is unconvincing, or target search phrases that can trigger a response (click) are missing. This can lead to decreased click-through rates as well as weakened search ranking potential.

Home Page META Description Duplicate: The home page META Description tag on pageroofandcontracting.com is not unique and is a duplicate with other interior web pages. Google's Webmaster Guidelines strongly recommend that each web page have a unique description that represents the purpose of each web page. Duplicate META Description tags fail to describe the uniqueness of each page and the purpose of the page, while also potentially diminishing the opportunity to capture competitive search engine rankings.

3) Content Optimization - In order for Google to identify the important keywords phrases of a website, keyword targeting must be consistent between the page title, META description and the bulk content of each web page. There must also be enough content on each web page to effectively communicate to Google about the purpose of the page. Web pages cannot rank well for search phrases that do not exist throughout a web page.

Web Page has Too Little Content: Some interior web pages of pageroofandcontracting.com have too little content. Google does not receive enough direction from the web page to describe what the web page is about or to implement target keywords which could improve the opportunity to capture competitive search rankings. It is difficult for any web page to capture search engine rankings for search phrases that do not exist on page.

Website Loads Slow: The overall user experience on a website is a major ranking factor with Google, which includes the page load speed. If Google perceives that a web page loads slow enough that it can impact a user's experience negatively, Google will penalize the website or web page. Unfortunately, the pageroofandcontracting.com website is being flagged by Google as having a slow load time. We strongly recommend looking at options to speed up your website, which can include image optimization, code optimization, page caching or even changing web hosts.

Website has Too Few Pages: The pageroofandcontracting.com website has too few web pages, reducing its ability to capture meaningful search engine rankings. Google's perception is that web pages that are shallow cannot adequately inform people who visit the website. Furthermore, it is difficult for a small set of web pages to cover all of the potential search phrases that people may use to find the various products and services offered by a website. It is recommended that each product or service offered by a website has its own dedicated web page. This allows for an increased focus for keyword targeting and more informative content regarding a particular product or service.

Making a Difference!

SEO Assessment Continued...

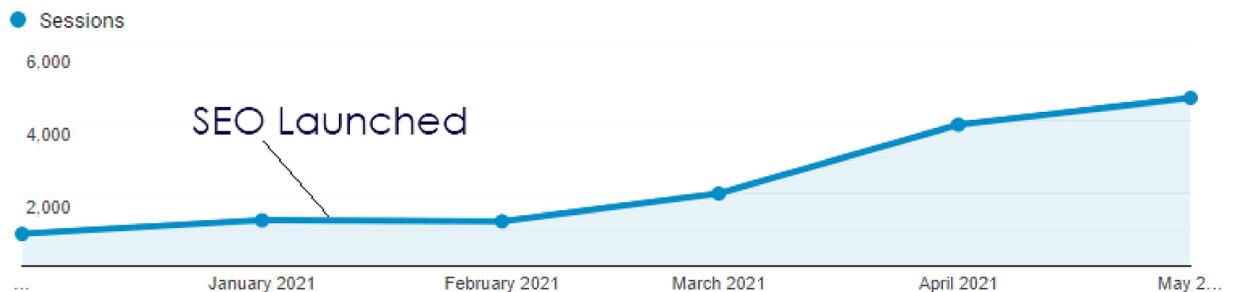

Home Page Keyword Density: Relevant and popular search phrases were found on the home page of pageroofandcontracting.com. However, the overall frequency of these keywords, known as keyword density, is too thin. Target keywords should stand out with multiple references on each web page in a tactful manner.

Web Page Needs Local Optimization: The pageroofandcontracting.com website serves a local audience, however, the integration of local phrases (city or state) on the home page and some internal web pages are not in proximity of target keywords. This makes it difficult for the search engines to associate strong keyword rankings for the communities that the website serves. Location phrases should be considered keywords and should also be in proximity to target keywords that represent the products and services that the website offers.

Web Page Internal Content Duplication: The pageroofandcontracting.com website has excessive content on interior web pages that is duplicated by other interior web pages on pageroofandcontracting.com. Google ignores duplicate content, making it unable to impact search engine rankings. Excessive duplicate content will cause Google to devalue the website, further diminish search ranking opportunities.

Fascinating SEO Stats

- 68% of online activities start with a search engine. 80% of all purchases start with search.
- 75% of searchers never click past the first page.
- As many as 46% of all Google searches are local.

Core SEO Task Summary Continued...

BUSINESS DIRECTORY SUBMISSIONS - Inbound links and business profiles through directory listings. Includes major business portals like manta.com and Merchant Circle. Entire network includes 200+ listings.

ONLINE YELLOW PAGE SUBMISSIONS - Link building and profile submissions through Online Yellow Pages websites like SuperPages.com, YP.com and Dex.

GPS & MOBILE MAP SUBMISSIONS - Link building and profile submissions across GPS Systems like TomTom, Chevy, Toyota and other automotive manufacturer's phone and mapping services.

VOICE RECOGNITION & SEARCH SUBMISSIONS - Link building and profile submissions through voice search technology like Apple's Siri, Windows Phones and Android Devices.

LOCAL SEO - Creation and/or optimization of up to two Google My Business listings.

SCHEMA MARKUP - For compatible CMS', the addition of basic schema.org markup in JSON-LD format.

SEARCH ENGINE SUBMISSIONS - Website submissions to over 25 US-based search engines, including all major engines and numerous secondary search engines.

ADAPTATION TO SEARCH ENGINE RANKING UPDATES - Google implements over 500 ranking adjustments per year. We make adjustments to your campaign to accommodate these changes.

ONGOING SEO SERVICES - Ongoing SEO tasks to ensure long-term campaign growth. A "whatever it takes" strategy to work on the specific elements of SEO that will produce the best results per the budget we have to work with. On a month to month basis the campaign will need to have different tasks prioritized, ranging from more content, page creation, content optimization, inbound links, keyword targeting, data highlighting, strategy adjustments, website corrections, bad link removal, etc.

XML SITEMAPS - Construction of XML sitemaps to ensure search engine BOT crawling and to identify crawling issues. Sitemaps are crawled by all major search engines.

BAD LINK CLEANUP - If bad inbound links are identified during the SEO Evaluation, we post the bad links to the Google Disavow Links tool to reduce their negative impact on search rankings.

GOOGLE ANALYTICS ACCOUNT CREATION - The creation of a Google Analytics account (if one does not exist). Evaluation of website traffic to identify the strengths and weaknesses of the website, and to provide performance feedback.

GOOGLE SEARCH CONSOLE CREATION - Creation of a Google Search Console account for Google. Google Search Console provides direct feedback from Google covering performance metrics about your website. This information is used to identify problems with the website, the campaign and to provide direction for future SEO work.

MONTHLY RANKING REPORTS & UPDATES - Campaign progress updates and a search ranking report showing rankings for relevant keywords on Google.

DIGITAL MARKETING CONSULTING - With over 25 years of experience, our digital marketing team has seen all that the internet has to offer. Tap our knowledge to help you to make the most sense of what works on the internet.
